1 Questions

1.1 Creating a socket

```
int new_socket;
if ((new_socket = socket(AF_INET, SOCK_STREAM, 0)) < 0) {
   perror("The socket was failed to be created!");
   exit(EXIT_FAILURE);
}
```

The above code is used to create a new socket in C and C++. Using this sample code, determine...

1.1.1 What does AF_INET mean when creating a socket?

1.1.2 What does SOCK_STREAM mean when creating a socket?
